

“The Sealed, Safe & Efficient Way” *Recommended for Mice in Transit*

Wouldn't it be nice if shipping containers were:

- divided into sealed compartments so that species and sexes couldn't intermingle
- easy to remove animals avoiding bites and scratches
- designed to avoid stress and injury to the animal
- had lots of view ports and air holes to avoid unnecessary opening
- came sterile or *on site* autoclaveable and could be directly filled in a barrier
- could be easily unpacked (no handling) with mice sliding right into their permanent cages

We Thought so too; and also added: **100% recyclable!**

The **TRANS-TAINER** System: **Tube, Caps, Carrier & Hydration Gel**

THE TUBE

114 grams live animal weight

The shape rodents feel comfortable in, they build tunnels! No corners or any place to begin gnawing. Reusable Opaque Polypropylene & Clear Polycarbonate are easily sanitized in cage washers and are safe for temperatures and disinfectants found in most facilities.

Simple, cost effective and economical! Barrier Friendly - Entry into the barrier is a simple spray or soak.

Available in 9" tube for "short term" inter facility travel.

THE END CAP

Securely snaps on, seal must be broken to remove. When cap is removed tube is slightly tilted and animals slide gently into cage. A new cap is always used and the .5 Micron polypropylene filter is ideal for hazardous species and reduces risk to handlers

THE CARRIER BOX

The Box will take three separate Trans-Tainer tubes effectively separating strains, species, micro-flora, health status & sexes. Tube isolation prevents cross contamination. Assembly and loading instructions are clearly printed on box. "LIVE ANIMAL" alerts are very visible to all courriers and handlers. Flaps fold down to create tabs which create an "air gap" so that end of box cannot be blocked off.

22.5" X 17.5" X 7.5"

The Convenient Reliable Moisture Source Recommended for Mice in Transit

AQUA-JEL

The gel is a reliable moisture source to prevent dehydration. It will not spill or get the animals wet - an amazing 98% available to the animal. Aqua-Jel is commercially sterile until opened and can be further gamma irradiated. No refrigeration is required, it's easy to use and store and comes in 3 convenient sizes.

ORDERING INFORMATION

MODEL	SIZE	PACKS/CASE	SHIPPING WEIGHT	AVERAGE UNIT PRICE	CDN PRICE 2+/CASE *
86-10	86 gram	10	1.5 lb	3.00	30.00
86-50	86 gram	50	7 lb	3.00	150.00
86-150	86 gram	150	21lb	2.52	379.00
150-100	150 gram	100	23.5 lb	3.05	305.00
